HOW TIP A SERVER

So many servers are under-tipped by customers every day, the main reason for it is that people don't know HOW to tip properly. Here are a few ways to calculate tips.

10% RULE

From the total amount for the check, move the decimal once to the left of the total. That is ten percent of the bill. Then just multiply the ten percent by two to get the twenty percent.

$80.00 → $8.00 X 2 =

$16.00 = 20%

2 DOLLAR RULE

Another way to calculate ten percent is to count how many total tens are in the total of your check. For each ten, two dollars would be twenty percent. So for each ten, you add another two untill you get to the twenty percent.

$80.00 = 8 TENS

8 TENS X 2 DOLLARS

$16.00 = 20%

CALCULATOR

The oldest and most conservative way to calculate tips is through a calculator. You take your total and multiply it by .20 to get twenty percent of the check.

$80.00 X 0.20

$16.00 = 20%
